

Fund description

The Fund invests in a mix of shares, bonds, property, commodities and cash. The Fund may buy assets outside the common monetary area (CMA) up to a maximum of 40% of the Fund. The Fund typically invests the bulk of its foreign allowance in a mix of funds managed by Orbis Investment Management Limited, our offshore investment partner. The maximum net equity exposure of the Fund is 75% and we may use exchange-traded derivative contracts on stock market indices to reduce net equity exposure from time to time. The Fund is managed to comply with the investment limits governing retirement funds. Returns are likely to be less volatile than those of an equity-only fund.

Fund objective and benchmark

The Fund aims to earn a higher total rate of return than that of the average Namibian retirement fund investment manager over the long term. The benchmark is the return of a daily weighted average index of Namibian multi asset class funds that comply with the limits governing Namibian retirement funds.

How we aim to achieve the Fund’s objective

We seek to buy shares at a discount to their intrinsic value. We thoroughly research companies to assess their intrinsic value from a long-term perspective. This long-term perspective enables us to buy shares which are shunned by the stock market because of their unexciting or poor short-term prospects, but which are relatively attractively priced if one looks to the long term. If the stock market offers few attractive shares we may increase the Fund’s weighting to alternative assets such as bonds, property, commodities and cash, or we may partially hedge the Fund’s stock market exposure. By varying the Fund’s exposure to these different asset classes over time, we seek to enhance the Fund’s long-term returns and to manage its risk. The Fund’s bond and money market investments are actively managed.

Suitable for those investors who

- Seek steady long-term capital growth
- Are comfortable with taking on some risk of market fluctuation and potential capital loss, but typically less than that of an equity fund
- Wish to invest in a unit trust that complies with retirement fund investment limits
- Typically have an investment horizon of more than three years

Minimum investment amounts

Minimum lump sum per investor account	N\$20 000
Additional lump sum	N\$500
Minimum debit order	N\$500

Fund information on 30 June 2024

Fund size	N\$4 592m
Price	N\$2 569.84
Number of share holdings	43
Class	B

1. On 1 February 2014 all the assets and unitholder liabilities of the Allan Gray Namibia Investment Trust were transferred to the Allan Gray Namibia Balanced Fund. The investment philosophy, strategy, fund objective, mandate, restrictions and fund managers remain unchanged.
2. Prior to the inception of this class of the Fund (1 October 2014) the performance and risk measures are calculated using the A class performance of the Fund.
3. The current benchmark is the return of a daily weighted average index of Namibian multi asset class funds that comply with the limits governing Namibian retirement funds, which is provided by Morningstar. From inception to 30 September 2014 the benchmark was the average Alexander Forbes Namibia Manager Watch Survey. Performance as calculated by Allan Gray as at 30 June 2024.
4. Maximum percentage decline over any period calculated from monthly returns. The maximum drawdown occurred from 31 January 2020 to 31 March 2020 and maximum benchmark drawdown occurred from 31 May 2008 to 28 February 2009. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).
5. The percentage of calendar months in which the Fund produced a positive monthly return since inception.
6. The standard deviation of the Fund’s monthly return. This is a measure of how much an investment’s return varies from its average over time.
7. These are the highest or lowest consecutive 12-month returns since inception. This is a measure of how much the Fund and the benchmark returns have varied per rolling 12-month period. The Fund’s highest annual return occurred during the 12 months ended 31 May 2001 and the benchmark’s occurred during the 12 months ended 30 April 2006. The Fund’s lowest annual return occurred during the 12 months ended 30 April 2009 and the benchmark’s occurred during the 12 months ended 28 February 2009. All rolling 12-month figures for the Fund and the benchmark are available from our Client Service Centre on request.

Performance (N\$) net of all fees and expenses

Value of N\$10 invested at inception with all distributions reinvested

Income distributions for the last 12 months

To the extent that income earned in the form of dividends and interest exceeds expenses in the Fund, the Fund will distribute any surplus biannually.	31 Dec 2023	30 Jun 2024
Cents per unit	3955.7857	4760.9017

Annual management fee

Allan Gray charges a fee on the portion of the fund they manage, excluding the portion invested in Orbis funds. The fee rate is calculated daily by comparing the Fund's total performance over the last two years to that of the benchmark.

Fee for performance equal to the Fund's benchmark: 1.00% p.a.*

For each percentage of two-year performance above or below the benchmark we add or deduct 0.1%, subject to the following limits:

Maximum fee: 1.50% p.a.*

Minimum fee: 0.50% p.a.*

This means that Allan Gray shares in approximately 20% of annualised performance relative to the benchmark.

A portion of the Fund may be invested in Orbis funds. Orbis charges performance-based fees within these funds that are calculated based on each Orbis fund's performance relative to its own benchmark.

*Management fees charged for the management of unit trust portfolios do not attract VAT.

Total expense ratio (TER) and transaction costs

The annual management fees charged by both Allan Gray and Orbis are included in the TER. The TER is a measure of actual expenses incurred by a fund over a one and three-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately.

Top 10 share holdings as at 30 June 2024 (CMA and Foreign) (updated quarterly)

Holdings	% of portfolio
FirstRand Namibia	3.4
AB InBev	3.0
British American Tobacco	2.8

The MSCI World Index continues to trade near all-time highs, mainly driven by large-cap US shares. The S&P 500 was up 4.3% for the quarter. The FTSE NSX Local Index returned 2.5% in Namibian dollars and 6.5% in US dollars, while the FTSE NSX Overall Index returned 19.3% in Namibian dollars and 24.0% in US dollars for the quarter. Meanwhile, the FTSE/JSE All Share Index was up 8.2% in rands and 12.4% in US dollars.

In our Q1 2024 factsheet commentary, we highlighted that 2024 would be a year of above-average political risk due to the significant number of elections taking place globally. We said, "In the normal course of thinking about investments, we don't pay special attention to politics, but we don't believe this is a normal election cycle. The outcome of some of the elections could drastically change many policies that affect some of our underlying holdings."

We are now halfway through 2024, and although our local election, along with the US, is still to come, we have already witnessed several important elections take place in Taiwan, the European Union, India and South Africa. As we expected, they have moved asset prices and triggered potential significant sociopolitical change:

- Taiwan elected a pro-independence leader despite pressure from China.
- The incumbent parties in Europe were decimated, especially in Germany and France. The French government called for a snap election, which led to a sell-off of French assets and broader European markets in sympathy.
- In India, Modi's Bharatiya Janata Party lost its majority in parliament, which initially led to a sell-off in the Indian market. However, the market recovered as Modi remained prime minister – albeit with less power.
- In South Africa, the African National Congress lost its majority, which has led to the formation of a government of national unity.

While it is still very early days in South Africa, it seems that the probability of the left-tail risk scenario (a sharp move to radical policies) has reduced and consequently increased the probability of the right-tail, very positive economic scenario.

In response, South African assets have rallied, with strong price movements in what investors collectively term SA Inc stocks, such as retailers, banks and property REITs. As discussed in previous commentaries, many of these shares

had been trading at very depressed levels when measured in US dollars. This was due to South Africa's poor economic fundamentals and exacerbated by investors waiting on the sidelines until the outcome of the election was known. When speaking to various sell-side institutions, we have heard that there was little foreign investor buying during the initial rally. Foreign investors are underweight South African markets in aggregate, so their potential buying could provide another leg up to the rally. Investors have also started taking a less constructive view on Mexico and Brazil, given some of their proposed political and economic changes. Any proceeds from reducing their positions in these markets may be switched into South African assets.

Of course, South Africa still faces significant social and economic headwinds, and it will be a herculean task to overcome them successfully, no matter who is running the country. The underlying fundamentals will have to improve to support the increase in asset prices if we are to avoid a repeat of the years post the Ramaphoria rally of 2018, which saw South African equities perform poorly.

While our local political environment has generally remained stable since independence, the upcoming local general election in November is not without its own risks. The probability of a left-tail risk scenario event, as described earlier, is not zero. Arguably, local politics has not yet played a pivotal role in driving the level of local asset prices, with fundamentals being the primary driver thus far. As the election approaches and becomes more front and centre, its potential impact on sentiment and on market prices may become more pronounced.

These geopolitical trends provide both risks and opportunities. We remind our clients that we have deliberately constructed a diversified portfolio for a wide range of outcomes. The portfolio has exposure to offshore assets, South African-listed shares that are international businesses, attractively valued South African-listed domestic businesses, attractively valued Namibian equities, high-yielding cash and bonds as well as precious metals. We believe running a successful asset allocation fund requires a holistic view of the portfolio that allows us to balance the opportunities and risks derived from our positioning.

Management Company

Allan Gray Namibia Unit Trust Management Company is an approved management company in terms of the Unit Trusts Control Act 54 of 1981 as amended, and is incorporated and registered under the laws of Namibia and supervised by the Namibia Financial Institutions Supervisory Authority (NAMFISA). The trustee and custodian is Standard Bank Namibia.

Performance

Unit trusts are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. Where annualised performance is mentioned, this refers to the average return per year over the period.

Unit price

Unit trust prices are calculated daily on a net asset value basis, which is the total market value of all assets in the portfolio, including any income accruals and less any permissible deductions from the portfolio, divided by the number of units in issue.

Redemptions

Allan Gray Namibia Unit Trust Management Company will repurchase any number of units offered to it on the basis of prices calculated in accordance with the requirements of the Unit Trusts Control Act 54 of 1981 as amended and on the terms and conditions set forth in the trust deed.

Total expense ratio (TER) and transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past one- and three-year periods. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged) and other expenses like audit and trustee fees. Transaction costs (including brokerage, securities

transfer tax, Share Transactions Totally Electronic (STRATE) and investor protection levies where applicable) are shown separately. Transaction costs are necessary costs in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager, and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns. As unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and transaction costs is shown as the total investment charge (TIC).

FTSE/JSE All Share Index and FTSE/JSE Capped Shareholder Weighted All Share Index
